## MINI PROJECT (2020-21)

### Simple Scheduling System

### REPORT

Institute of Engineering & Technology

**Submitted by**

**Chanchal kaushik**

**(181500194)**

**Girish kumar**

**(181500239)**

**Abhishek Pratap(181500023)**

*Supervised By: -*

**Mr. Pakaj kapoor**

Technical Trainer

**Department of Computer Engineering & Applications**

## SYNOPSIS

### Student information:-

Name;- Chanchal kaushik,Girish kumar and Abhishek Pratap singh

University Roll No.: - 181500194,181500239,181500023

Mobile :- 8077160557,7870557068,9520884827

Email:- chanchal.kaushik\_cs18@gla.ac.in,Girish.kumar\_cs18\_cs18@gla.ac.in, Abhishek.pratap\_cs18@gla.ac.in

### Information about Organization:-

Organization Name With full Address:- 17km Stone,NH-2,Mathura-Delhi Road Mathura,Chaumuha,Uttar Pradesh 281406

Contact Person :- Mr.Pankaj Kapoor

### Project Information:-

Title of Project;- Simple Scheduling System

Technical Ditals:- Hardware Requirements;  
processors RAM, Hard disc,monitor,keyword  
software requirements ; Database(mysql server),web server(xampp),browser

## **ACKNOWLEDGEMENT**

[Remove Watermark Now](#)

We chanchal kaushik ,Girish kumar and Abhishek Pratap singh express our sincers thanks to my project mentor MR. Pankaj Kapoor Technical Trainer GLA University ,Mathura.We pay our deep gratitude towards MR. Pankaj Kapoor sir , GLA Univerisity ,Mathura who encouraged us to the highest peak and provided us the opportunity to prepare this project .I am wholehearted thankful to them for giving us their valuable time and attention and for providing a systematic way of complimenting my project in time

We are immensely obliged to our friends who help us to for their cooperative inspiration and kind supervision in the completion the project.

We feel highly acknowledged to all those who help and encouraged us in completion of the given task .We take this opportunity to record our sincers thanks for our parents who uneasly encouraged and support us .At last we would like to thanks to God almighty without whose blessing this project would never been possible.

### **Abstract**

The study was conducted to assess the methods and processes used by the academic institution in preparing the class schedule, the problems encountered by the students and instructors with regards to speed, accuracy and efficiency in retrieving the class schedule, the level of acceptability on the current class scheduling,

and the level of need for developing a Class Scheduling System. The Class Scheduler will assist the institution in making the schedule of classes in an efficient and easy way, as well as, aid the students and instructors in checking their class schedules in a quick manner.

The respondents of the study were the students, faculty and non-teaching personnel of the school. The researchers used a stratified random sampling after determining the sample size to reach the target respondents. Descriptive research was used in gathering important information and specific data useful in the study.

The results of the study showed that majority of the respondents identified that there is a moderate level of acceptability of the current class scheduling used by the department and that there is a moderate level of need for developing the Class Scheduling System.

### **Introduction**

#### **1.1 General Introduction to the topic**

To build a simple scheduling system using PHP,CSS,Bootstrap, and JavaScript.it contains almost all the essential features.This project contains an admin side where admin can set schedules. manage Faculty subject room ,time ,course and view list.

The Admin plays an important role in the management of the system. In this project, the user has to perform all the main functions from the Admin side. A user can also register as a new user if he/she does not have an account.

## About System: -

The Admin has full control of the system, all the functions are to be performed from Admin panel. Here, the admin can set different schedules easily. In order to set schedules, the user has to select Faculty, Course, Subject, Room, enter start and end time. The user has to insert details on each and every module. While adding subjects the user has to provide subject code with a description. The user should provide Faculty name and Designation in order to add Faculty

Adding a course is also similar to adding subjects which can be done by providing Course code and course name. Also, the user just has to provide a room number and enter starting time, ending time to add Room details and time.

## What is PHP: -

 PHP is a general-purpose scripting language especially suited to web development. It was originally created by Danish-Canadian programmer Rasmus Lerdorf in 1994. The PHP reference implementation is now produced by The PHP Group. PHP originally stood for Personal Home Page, but it now stands for the recursive initialism PHP: Hypertext Preprocessor.

## What is XAMPP: -

XAMPP is an abbreviation where X stands for Cross-Platform, A for Apache, M stands for MySQL, and the Ps stand for PHP and Perl, respectively. It is an open-source package of web solutions that includes Apache distribution for many servers and command-line executables along with modules such as Apache server, MariaDB, PHP, and Perl.

XAMPP helps a local host or server to test its website and clients via computers and laptops before releasing it to the main server. It is a platform that furnishes a suitable environment to test and verify the working of projects based on Apache, Perl, MySQL database, and PHP through the system of the host itself. Among these technologies, Perl is a programming language used for web development, PHP is a backend scripting language, and MariaDB is the most vividly used database developed by MySQL. The detailed description of these components is given below.

**What is Mysqli:** - MySQL is a fast, easy-to-use RDBMS being used for many small and big businesses. MySQL is developed, marketed and supported by MySQL AB, which is a Swedish company. MySQL is becoming so popular because of many good reasons –

1. MySQL is released under an open-source license. So you have nothing to pay to use it.
2. MySQL is a very powerful program in its own right. It handles a large subset of the functionality of the most expensive and powerful database packages.
3. MySQL uses a standard form of the well-known SQL data language.
4. MySQL works on many operating systems and with many languages including PHP, PERL, C, C++, JAVA, etc.

## Hardware Requirements

1. processor
2. RAM
3. Hard disk(20GB)
4. monitor
5. keyboard

## Features:-

1. Login/Register
2. Set Schedule
3. Manage Subject, faculty,course
4. Set starting and ending Time
5. View Schedule

## Software Requirements:-

1. Database(My SQL Server)
2. Web Server(Appache,Xampp)
3. Browser(Google chrom,mozilla,opera etc)
4. Language(PHP)
5. other languages (HTM,CSS,Javascript)
6. operating Systems(windows 10,windows xp,windows 8 etc.)

## Objective:-

The main objectives of the creating the Simple Scheduling system ,we can list of faculties,courses,subject,rom and class time with its all ditails.here users can also remove the records if needed.This project mainly focuseson CRUD functions.To manage subject,Faculty,Course,room.We can set starting and Ending time.

## Implementation Details

To build a Simple Scheduling System using PHP and MySQL.  
With the help of PHP we have created login registration bar in which we can login with login id or we can register.  
Now with the help of PHP now we have created add course in which we can add course.  
With the help of PHP We have created add faculty in which we can add any faculty related to the course.  
With the help of Xampp we have created a insertion named database in PHPmyadmin database has been successfully created.  
With the help of php we have created home index delete pages.In delete bar we can remove

SCHEDULING SYSTEM
